

Elastic Detector

Master your Cyber Risk!

Elastic Detector revolutionizes threat detection thanks to its twice patented innovative technology. **This new automatic audit model detects threats in 100% of the audits.**

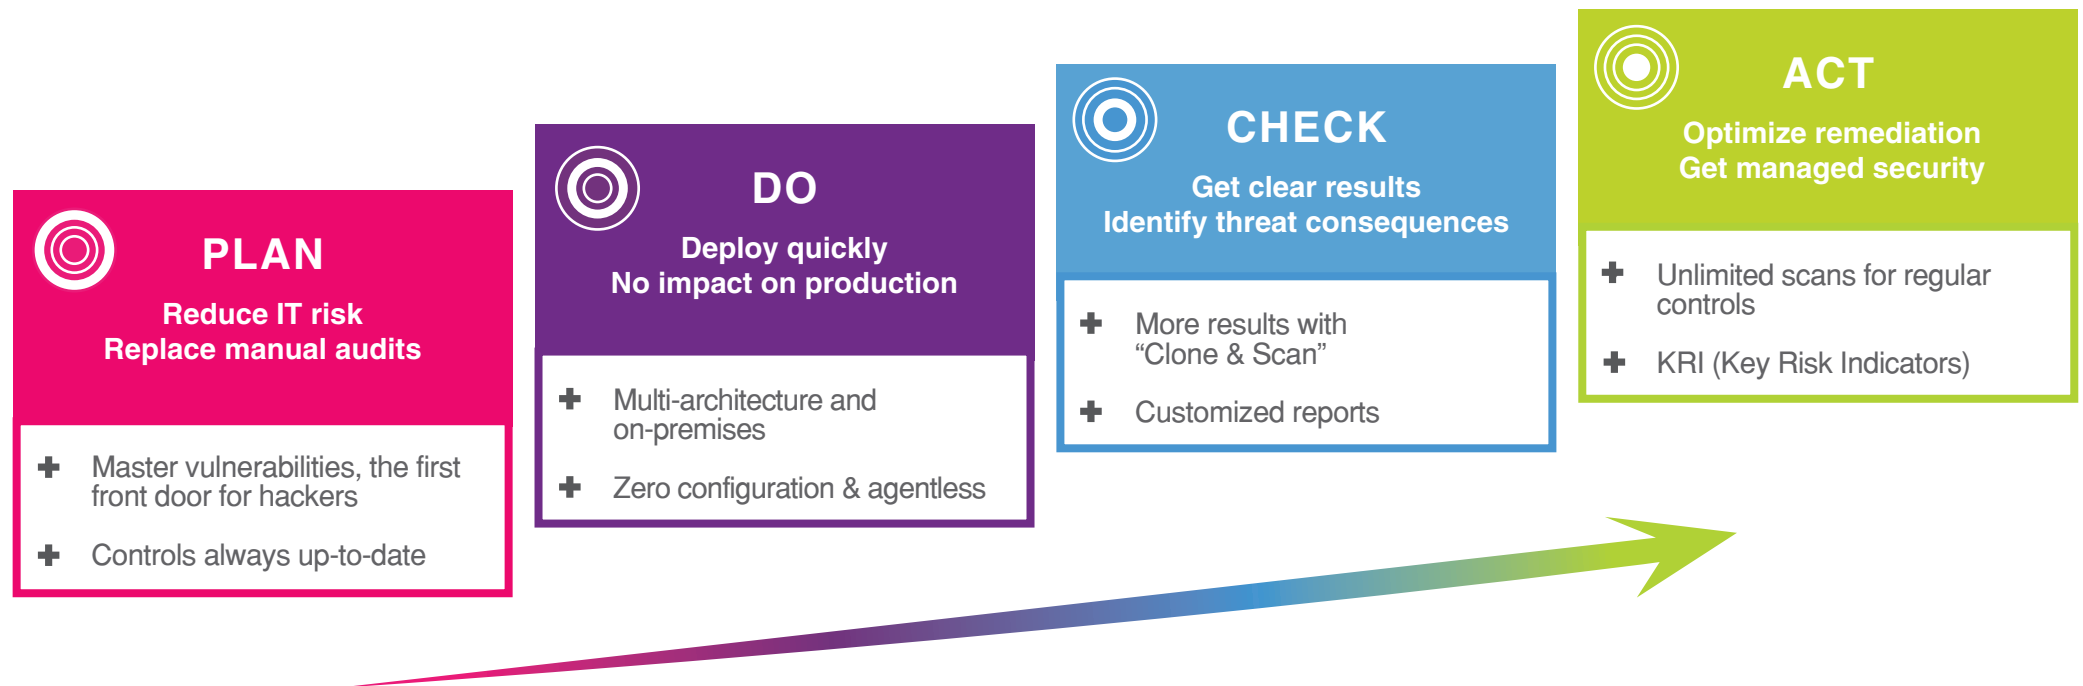

It is agentless, it adapts instantaneously to all environments and it is able to evolve itself with the IT infrastructure.

A fully automated cloning process allows Elastic Detector to do a deep security analysis, without impact on the original production server.

Therefore no threat can resist to the in-depth security audit from Elastic Detector.

The answer to CISOs lack of time and resources

"We wanted an external scan solution for our servers to ensure our security. Elastic Detector from SecludIT perfectly meets our needs in terms of quality. It raises alerts and continuously audits, all with a very simple configuration."

Pierre-André Filippi, Delta Assurances CISO

AUTOMATION

Networks and servers automatically discovered

Security perimeter adapts to infrastructure evolutions

No risk of manual errors

CONTINUOUS ANALYSIS

Autonomous and automatic security tests

New servers immediately put under scrutiny

Tests base daily updated

AGENTLESS

No software to install on your servers

No deployment or maintenance costs

No Trojan horse risk

CLONE & SCAN

Deep intrusive server analysis

No impact on production

Less false-positives and dormant servers included

MULTI-ARCHITECTURE

Cloud, virtual, physical, hybrid, Microservices and Docker

All major Cloud providers supported

“On-premises” private deployment supported

RISK REPORTING

Detailed reports and alerts in real time

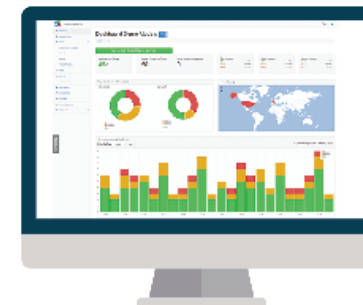

Dashboard with key risk indicators

Action plan with priorities

Reporting adapted to security experts and the C-Suite

Our highly-visual reports advise and enlighten companies for efficient management of their security and compliance. Key Risk Indicators for the C-Suite while all vulnerabilities are clearly detailed to the experts.

Elastic Detector improves operational productivity while allowing the elimination of risks.

Security expertise by SecludIT

French company, founding member of the Cloud Security Alliance, SecludIT is a worldwide recognized player for its patented revolutionary technologies and cyber risk management approach. SecludIT provides software to help to protect data, servers and applications.

SecludIT is a software company, founded by seasoned experts in network infrastructure security and virtualization. Started in 2011 to answer security and vulnerabilities in IT infrastructures, the enterprise has become an industry recognized player, building partnerships with companies such as Microsoft, Amazon Web Services, VMware, HP and Docker.

vmware

Awards

Thanks to its twice patented technology and its expertise, SecludIT received prestigious awards in innovation and security such as IBM SmartCamp, Huawei INNOSTART security, FIC and EuroCloud France.
